How to Submit Your Java Project on KU Learn Hub

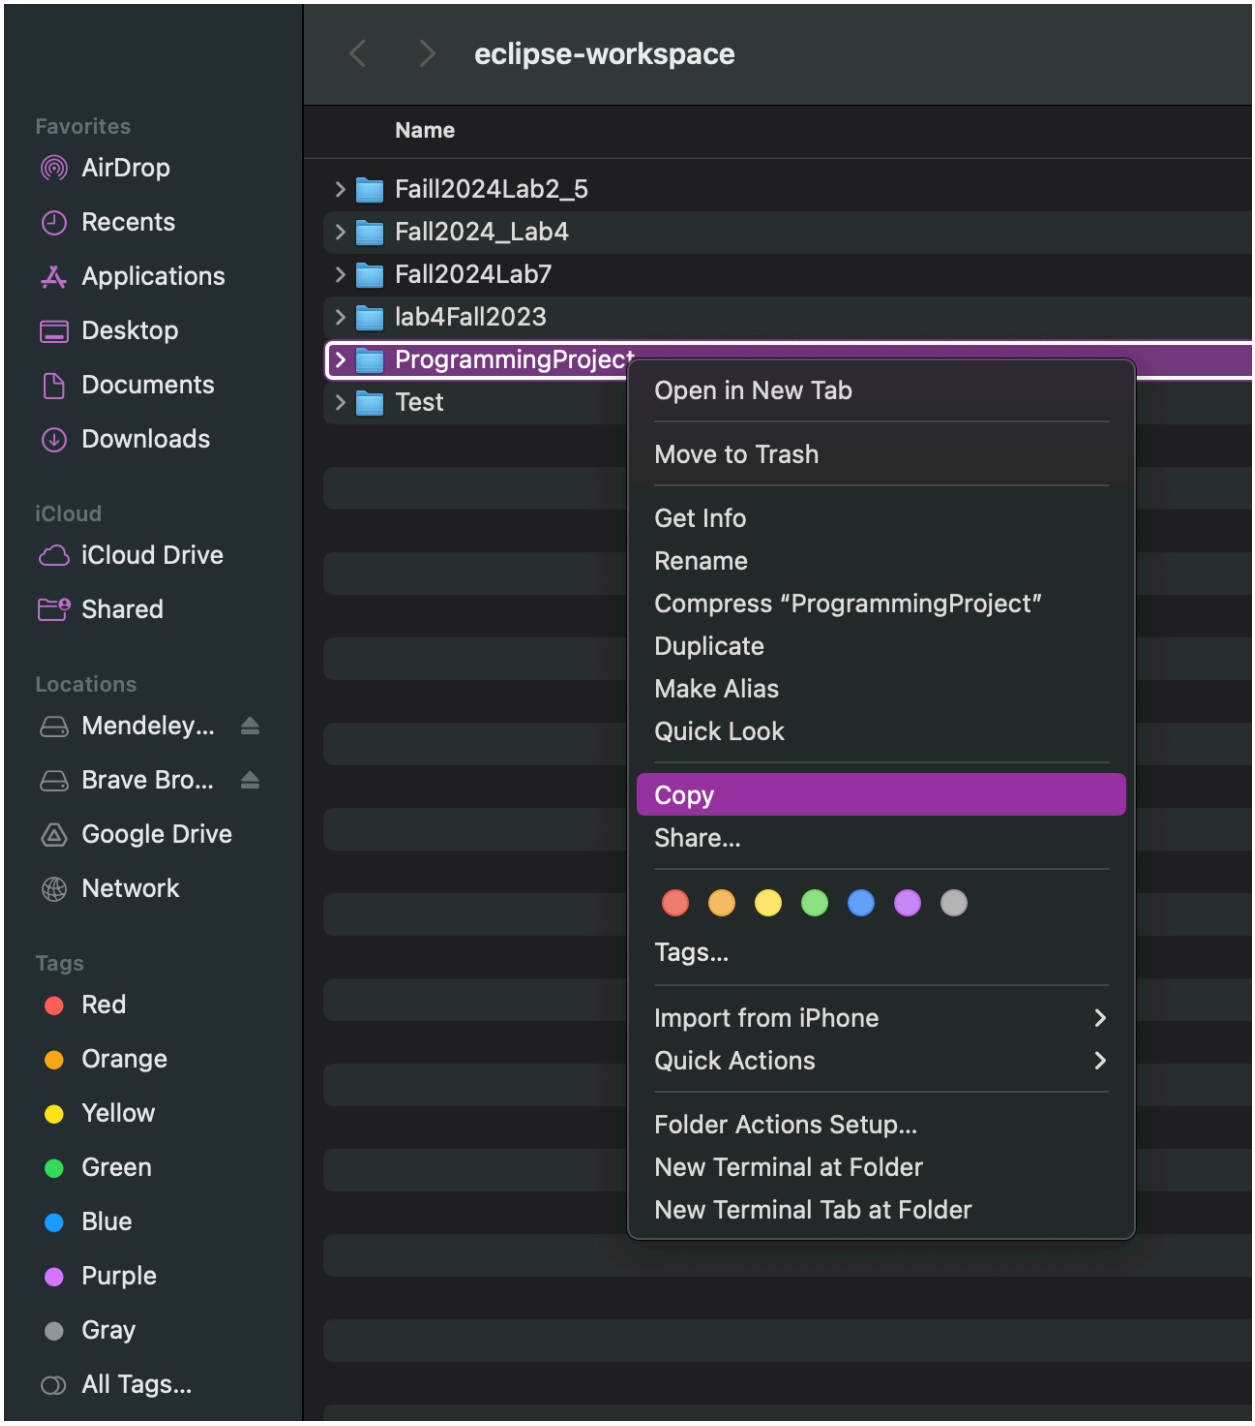

Dear Students,

In this document, I'll walk you through the process of submitting your Java project to the KU Learn Hub. Please read through the following steps carefully and refer to the attached screenshots for a visual guide.

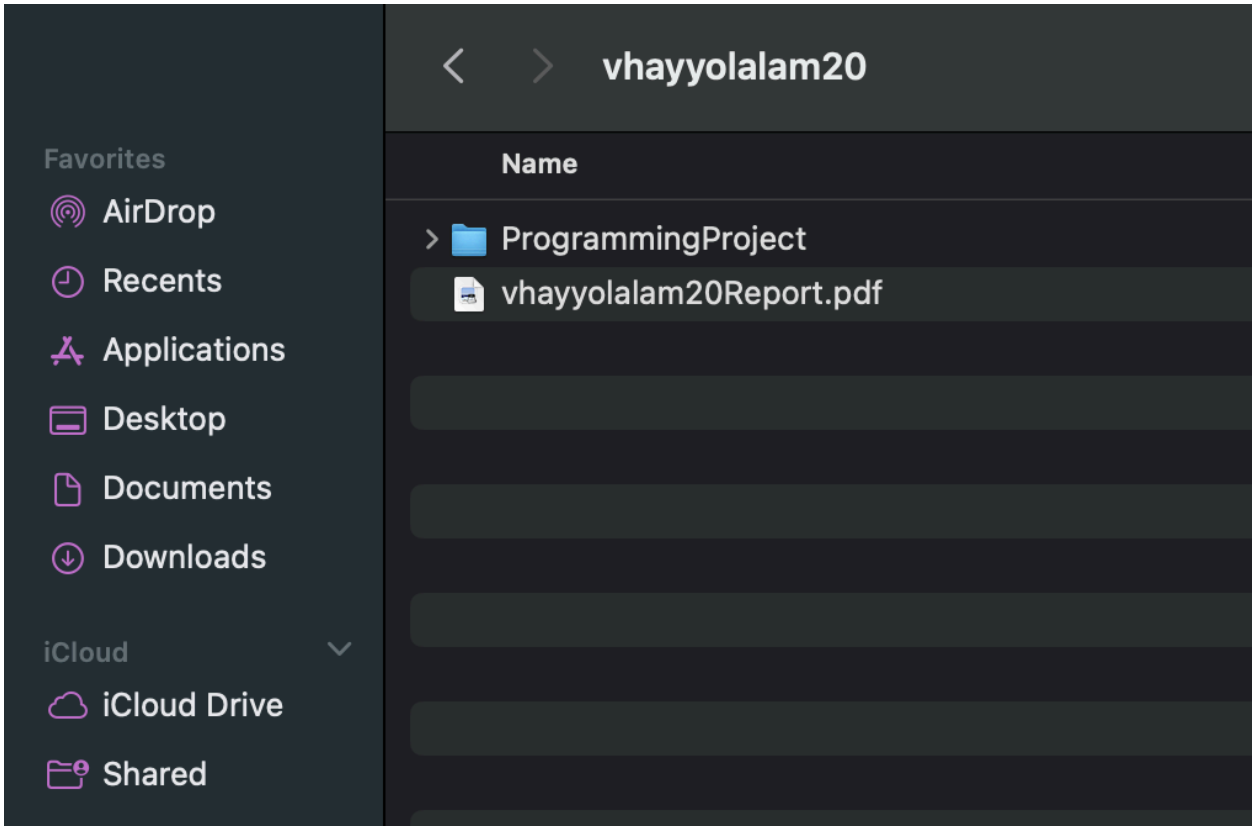

1. **Create a Folder Named with Your KU ID**
    - In your file explorer, create a new folder and name it **your KU ID** (for example, "*vhayyolalam20*").
2. **Locate Your Project**
    - In Eclipse, Project Explorer, right-click on your project folder and select *Show in >> System Explorer.*

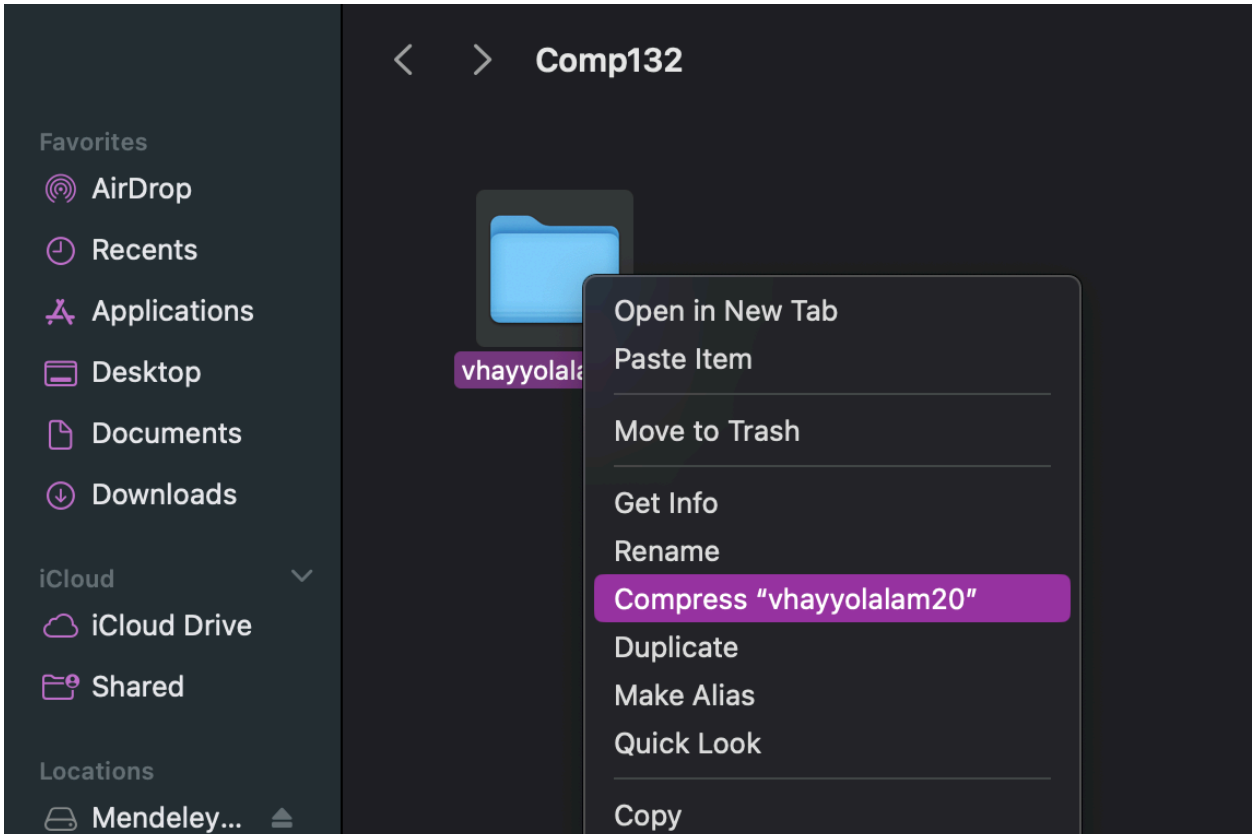

3. **Copy Project Files into the New Folder**
    - Copy your entire Java project folder (or its contents) into the new folder you just created.

4. **Include Your PDF Report**
    - Place your final report (in PDF format) into the same folder.

5. **Zip the Folder**
    - Right-click the folder (named with your KU ID).
    - Select ***"Compress yourFileName"*** (in Mac), **"Send to"** → **"Compressed (zipped) folder"** (in Windows), or the equivalent on your operating system.
    - This will create a .zip file of your folder.

6. **Submit on KU Learn Hub**
    - Log in to the KU Learn Hub and go to our course page.
    - Locate the **Assignment** we have created for the Java project.
    - **Upload** your zipped folder (.zip file) to the assignment submission link.
    - Finally, **click Submit** (or "Save Changes" if required) to complete your submission.

If you have any questions or run into issues, don't hesitate to contact me or post on the course discussion board.

Please make sure that your project compiles and runs properly before zipping the folder. Also, confirm that the PDF report is included and readable. Good luck!
